

E-Authentication Federation Expands

The E-Authentication Federation achieved significant growth last week with the addition of 15 new relying party systems. This expansion more than doubles the total of operational relying parties in the Federation, bringing that number to 31 systems.

The newest members of the Federation include the Department of Health and Human Services National Select Agent Registry; U.S. Department of Agriculture HSPD-12 Maps; Department of Transportation COMPASS; Department of Justice E-Trace, and Small Business Administration Global Login System, which provides E-Authentication-enabled login service to 12 distinct SBA applications.

Check this site often, as E-Authentication continues working to bring additional valuable credential service providers and government relying party systems and to the E-Authentication Federation.
